National Institute Of Technology, Warangal

EDUCATION

•NIT WARANGAL

CGPA: 8.1

B.Tech Computer Science and Engineering (2024-present)

•Sri Chaitanya Junior College (2024)

Percentage: 96.4

•Viswabharathi EM School (2022)

Percentage: 95.34

ACHIEVEMENTS

•Solved 320+ DSA problems on LeetCode

Ongoing

•Achieved 1650+ rating on LeetCode

Ongoing

TECHNICAL SKILLS AND INTERESTS

Languages: C++ , Java , HTML , CSS , JavaScript , SQL

Tools: Git , GitHub , VS Code , IntelliJ IDEA, Postman

Frameworks and Technologies: Spring Boot , Spring Security ,Hibernate , REST APIs ,React

Cloud/Databases: MySQL

Coursework: Data Structures , Object Oriented Programming , Database Management System , Operating Systems , Web Development , Computer Networks

Areas of Interest:Data Structures and Algorithms , DBMS , Java OOPs

PERSONAL PROJECTS

•Placement Management System

Tech Stack: Java, Spring Boot, Spring Security, JWT, Hibernate, JPA, MySQL, REST APIs, React (or HTML/CSS/JS)

- Developed a full-stack Placement Management System with secure role-based access for Students, Companies, Placement Officers, and Administrators using Spring Boot, React, and MySQL.
- Implemented JWT authentication, Spring Security, BCrypt password hashing, and role-based authorization to secure REST APIs and protect application resources.
- Designed and developed 20+ RESTful APIs using a layered architecture (Controller–Service–Repository), improving modularity, maintainability, and scalability.
- Engineered a normalized relational database with JPA/Hibernate, modeling complex entity relationships to support student profiles, job postings, applications, and placement drives.
- Built an end-to-end recruitment workflow enabling job posting, candidate applications, application tracking, and shortlisting through a production-style backend architecture.
- Improved application reliability by implementing DTOs, input validation, global exception handling, and standardized API responses following REST best practices.
- Containerized the application using Docker and deployed on Google Cloud Platform (Compute Engine), configuring firewalls and environment variables for production-like staging.

•Distributed Task Execution Engine

Tech Stack: Java 21, TCP Sockets, ExecutorService,ConcurrentHashMap

- Built a master-worker distributed application in pure Java that distributes CPU-intensive tasks across multiple worker JVMs using TCP sockets.
- Implemented concurrent task execution with ExecutorService and thread-safe task management using ConcurrentHashMap.
- Developed heartbeat-based worker monitoring and automatic task reassignment to improve reliability during worker failures.
- Simulated a distributed environment locally across multiple JVM instances, gaining hands-on exposure to Java networking, thread management, and fault-tolerant design fundamentals.

CERTIFICATIONS

Meta Full-Stack Developer Professional Certificate: Completed an intensive 9-course specialization covering React,JavaScript, SQL,Git Version Control via Coursera.
